About Ionic Stone

COMPANY

Founded over 2 decades ago with the intention of supplying natural stone tiles and mosaic ranges to retailers, we have unquestionably become one of the UK's largest stone tile distributors. Today, with two UK distribution centres totalling over 80,000 sq. ft. of space, and over 350,000 m2 of stocks, we are renowned for our excellent customer service and high quality of products.

FACTORY

In 2009 a vast investment began into processing by establishment of a stone processing facility. By the end of 2011 the plant began its operations and since then, stones processed at this facility are exported to many countries around the world. Sitting on a 32,000-m2-land, the Ionic factory is equipped with fully integrated state-of-the-art machinery and is capable of processing any type of stone into any format required. The factory is located in Denizli, only a stone's throw away from the world-famous travertine quarries and strategically placed between our Lilia quarry and the Izmir Port.

QUARRY: LILIA

Located on the Turkish part of the Alp-Himalayan mountains, the Lilia quarry is fully owned by us and produces the most warm-coloured cream marble, which makes it an extremely attractive choice for projects.

QUARRY: TAVAS WHITE

This quarry produces white marble, similar to the world-renowned Mugla White, and was put into operation in 2022. The quarry is located near Denizli-Aydın border and has very large reserves.

HASSLE-FREE SERVICE & QUALITY AS STANDARD

We rigorously follow the technological developments in the stone processing field. Techniques used in our production are most advanced, and all products go through stringent quality checks before they are packed. Most of Ionic's marble tiles are enhanced with resin and mesh and are therefore reinforced for durability and strength. However, resin and mesh application can sometimes create problems for end-users in installation; certain adhesives do not work on reinforced tiles. To tackle that issue, grains of marble are sprayed onto the backs of tiles so that setting can occur.

MERCHANDISING AS STANDARD

We understand the nature of retailing better than most producers. From merchandised packaging to display stands, we can provide assistance in the critical yet overlooked parts of the business. We produce merchandised display stands laden with our entire range, which will help quickly transform stocks into sales. Additionally, if the order volume is sufficient enough, the packaging of our products could also be customised for you.

Panoramic view of the Ionic factory

HIGH PRODUCTION OUTPUT

Our processing plant has the monthly production capability of over 40,000 m² for slabs or 20,000 m² for cut-to-size and tiles. The factory has the necessary equipment and organisational skills to cover the entire manufacturing process: from block sawing to the final touches of cut-to-size pieces.

Fully automated tile line, produced by IonBreton PLC, a consortium of Ionic Stone and Breton SpA, that makes quality machines for stone processors around the world. It is the first of its kind in the world and its operational mechanism is internationally patented.

ADVANCED MANUFACTURING

We strongly support technological and methodological development and promote research activities within the company. In addition to utilising the very latest state-of-the-art machinery, which enhances the quality of production and reduces processing costs, a division called Ion Machines was established with the task of improving the technology of the current machines at the plant and

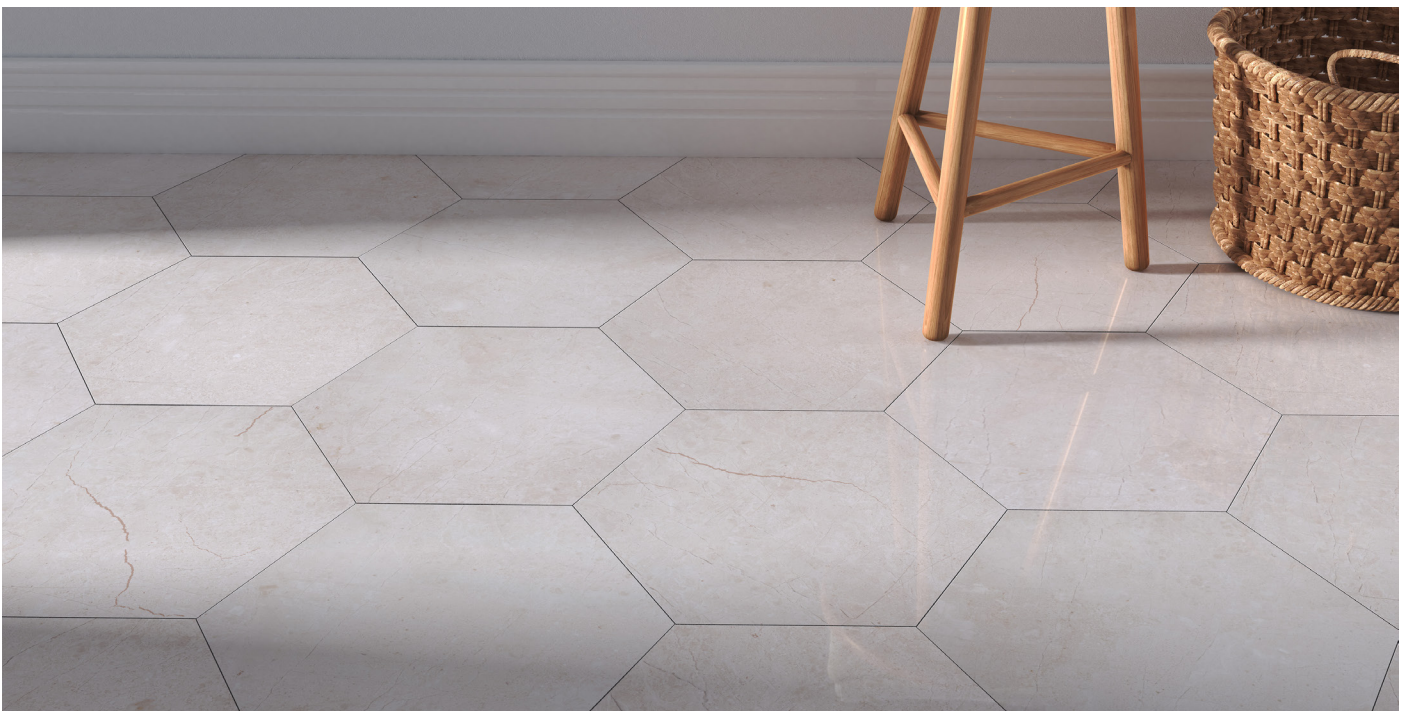

developing new and innovative machines for Ionic's own use. This division later received an investment from Italy-based Breton, the world's largest producer of stone processing machines, and subsequently IonBreton was born. Today, IonBreton equips stone processing factories around the world with its machines and holds international patents for some of them.

The World's First Marble Hexagon Tile Mass-Producer

Ionic Stone is the world's first mass-producer of innovative format marble tiles such as hexagons and trapezoids. With the inclusion of our own special machinery, which is a product of a long and arduous R&D process, Ionic Stone have been able to devise a unique technique that has allowed us to become competitively priced with our innovative format tiles. This process was previously only possible with waterjets. However, the running costs of waterjets are exorbitant and today Ionic Stone can offer these innovative formats at a fraction of the cost.

Award-winning Company

Ionic Stone is widely respected within the industry, having garnered numerous accolades for its products, designs, and services. Receiving awards from globally recognised companies has been a tremendous honor for us. Our vision places utmost importance on quality, operational excellence, and customer satisfaction. These awards serve as a testament to our unwavering dedication to enhancing every facet of our business.

STONE COLLECTIONS

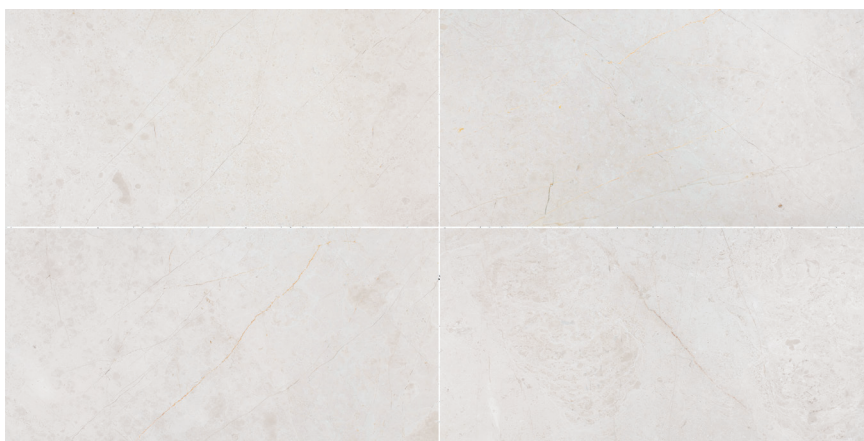

Timelessness is the key value that natural stones can present to architecture in a project. They never go out of fashion and can remain in settings without time affecting it. At Ionic Stone, we put together a stone range that covers the most sought-after stones originating in Turkey. Our ranges contain slabs, tiles, mosaics and finishing touches such as skirtings.

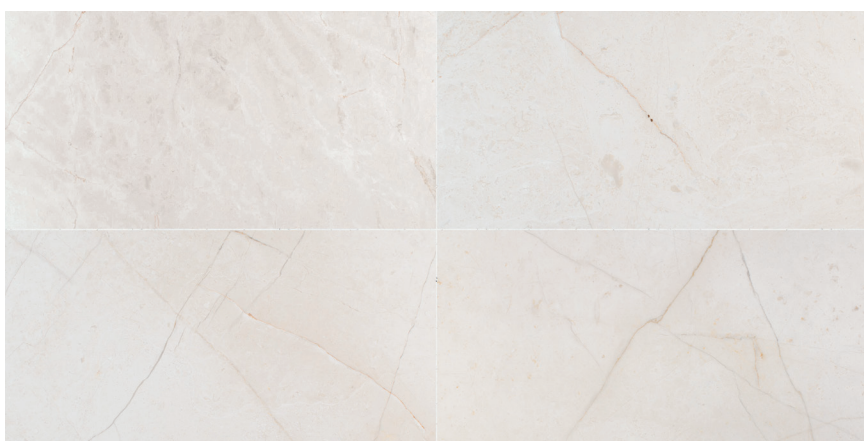

LILIA Collection

Floor Covering Lilia Cream

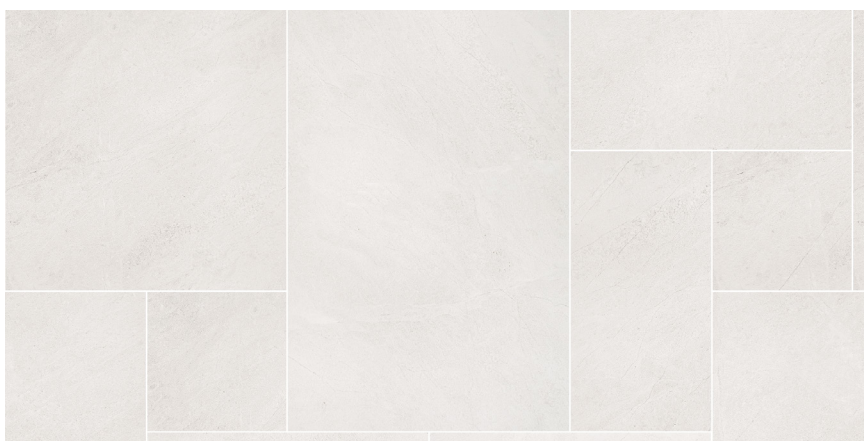

From our own quarry located in Burdur, Lilia has a soft cream tone that blends in all kinds of spaces, from classic to modern. Available in two main selections; Cream and Classic. In addition to those of honed and polished, Aged and Sandbrushed are new surface finishes now available as standard.

INNOVATIVE COLLECTIONS

Ionic Stone is the world's first mass-producer of contemporary format stone tiles. Regular, Oblong and Mayfair collections are unique formats that cannot be found elsewhere in the market.

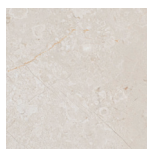

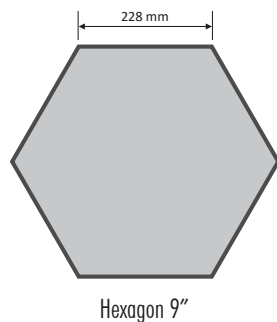

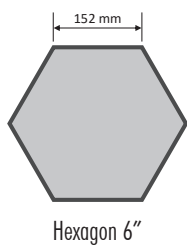

Reminiscent of the patterns typical of traditional ceramic tiles while still following the latest trends. Bookmatched tiles exhibit another innovation; tiles from the production line come out book-matched as standard.
